

A₄B

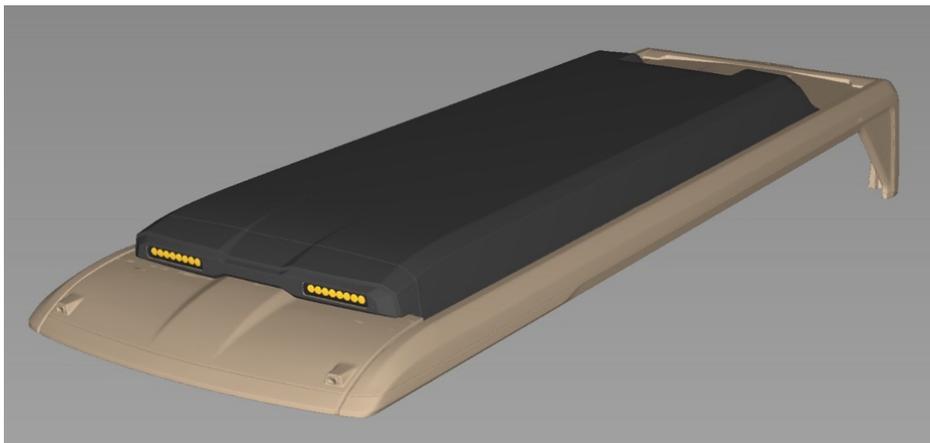

The **highroof** for your Praetorian

A4B

To build a proper motorhome, you need to raise the interior height of the Praetorian.
For this reason, we at **ALL4BUS** have **developed a highroof**.
This can be retrofitted to any Praetorian.

The new interior height is **220cm**.

Enough space to insulate the floor and the roof. And enough space for tall people to stand upright.

How is it made?

- We cut open the original skeleton and roof.
- Then we raise the roof-section (400cm x 180cm) by 30cm.
- We rivet the Skelton with high-strength rivets using suitable adapters.

- On the outside, the bus is given a new roof shell. This can be coated in the colour of your choice and in the durable Bulletliner protective coating. Like the Pretorian itself.

Designed and developed by ALL4BUS GmbH.

Produced in the same factory where the TORSUS original Praetorian body parts are manufactured.

The front of the highroof is complemented by **two high-performance LED headlights** from Lazer Lamps.

Delivery time incl. Assembly time: About 3-5 months

Price incl. installation, coating, headlights and cabling: € 32.800 + VAT
